	GLOBAL ECONOMICS **GRADE: 10** **LEARNING EVIDENCE 2** **Standard Deviation and Mean (C4)** **TEACHER'S NAME: Nicolás López Cuéllar**	**TERM 3** **2025–2026**

Learning objective: Interpret expected value, variance, and standard deviation from probability distributions by linking graph shape, center, and spread.	**Assessment criteria:** **C4.** Interprets the concept of expected value, variance, and standard deviation of a probability function.

Criteria assessment

Each problem that is completed correctly gives points. The quiz has a maximum score of 28 points. To pass the criterion, the total score must be 22 points or higher. The quiz must be completed in pairs.

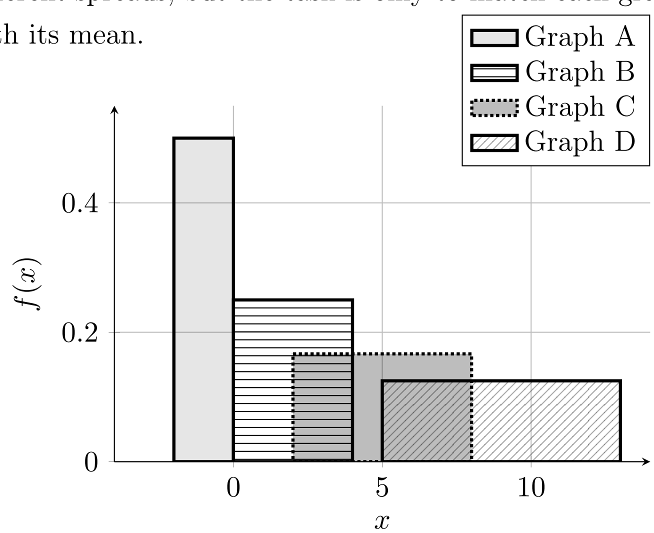
Uniform Distribution

For a uniform distribution $U[a, b]$:

$$\mu = \frac{a+b}{2} \qquad \sigma = \frac{b-a}{\sqrt{12}}$$

1. (1) Uniform: match graphs with their means

Four uniform densities are shown. The distributions have different spreads, but the task is only to match each graph with its mean.

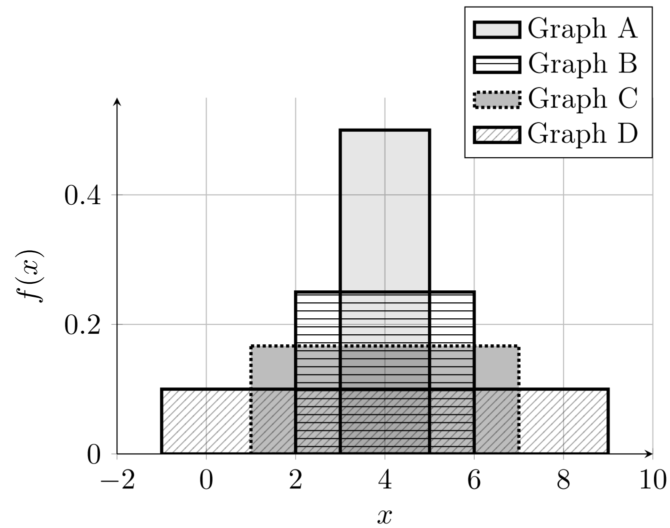


Match each graph with one mean option. Some options will not be used.

- Mean options: $\{-1,\ 0,\ 2,\ 5,\ 9,\ 12\}$

2. (1) Uniform: match graph with their spread

Four uniform densities are shown. All four distributions have the same expected value, so only the standard deviation changes.

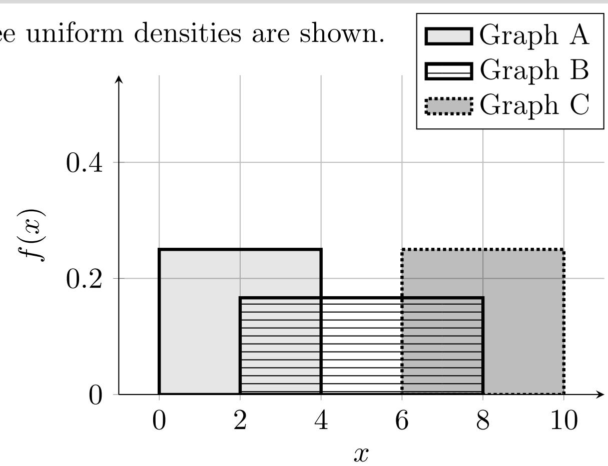


Match each graph with one standard deviation option. Some options will not be used.

- Standard deviation options (approximately): $\{0.58,\ 1.15,\ 1.73,\ 2.89\}$

3. (1) Match graph, mean, and spread for three uniform distributions

Three uniform densities are shown.



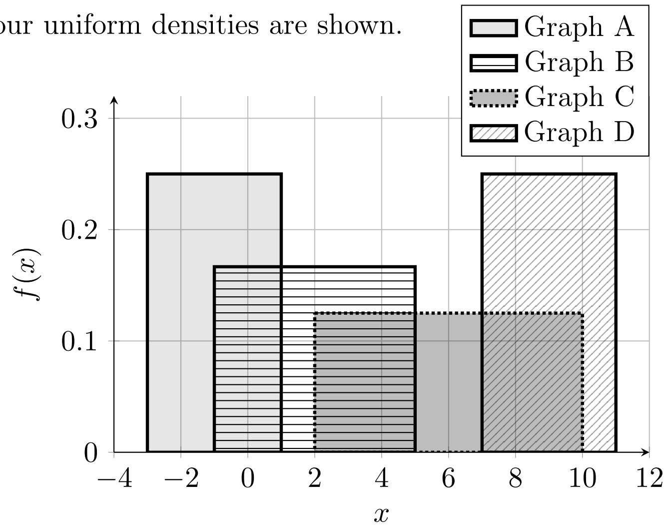
Match each graph with one option from each list.

- Mean options: $\{0,\ 2,\ 5,\ 7,\ 8, 9\}$
- Standard deviation options (approximately):

$\{0.15,\ 1.15,\ 1.15,\ 1.73\}$

4. (2) Match graph, mean, and spread for four uniform distributions

Four uniform densities are shown.



Match each graph with one option from each list. Some options will not be used.

- Mean options: $\{-3,\ -1,\ 2,\ 6,\ 9,\ 10\}$
- Standard deviation options (approximately): $\{0.58,\ 1.15,\ 1.15,\ 1.73,\ 2.31\}$

5. (2) Uniform: draw three uniform distributions on the same graph

Draw the following three uniform distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: mean $\mu = 0$ and standard deviation $\sigma \approx 1.15$
- Graph B: mean $\mu = 4$ and standard deviation $\sigma \approx 1.73$
- Graph C: mean $\mu = 8$ and standard deviation $\sigma \approx 0.58$

6. (2) Uniform: draw four uniform distributions on the same graph

Draw the following four uniform distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: mean $\mu = -1$ and standard deviation $\sigma \approx 0.58$
- Graph B: mean $\mu = 2$ and standard deviation $\sigma \approx 1.15$
- Graph C: mean $\mu = 6$ and standard deviation $\sigma \approx 1.73$
- Graph D: mean $\mu = 9$ and standard deviation $\sigma \approx 2.31$

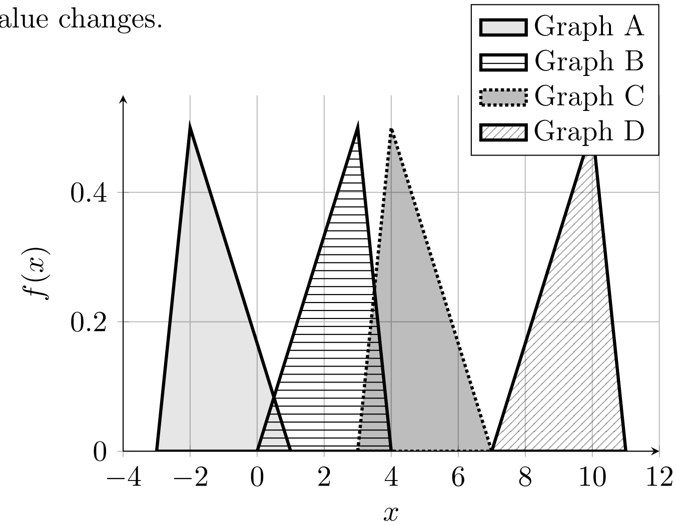
Triangular Distribution

For a triangular distribution with left endpoint a, mode c, and right endpoint b:

$$\mu = \frac{a+b+c}{3} \qquad \sigma = \sqrt{\frac{a^2+b^2+c^2-ab-ac-bc}{18}}$$

7. (1) Triangular: same spread, different mean

Four triangular densities are shown. All four distributions have the same standard deviation, so only the expected value changes.

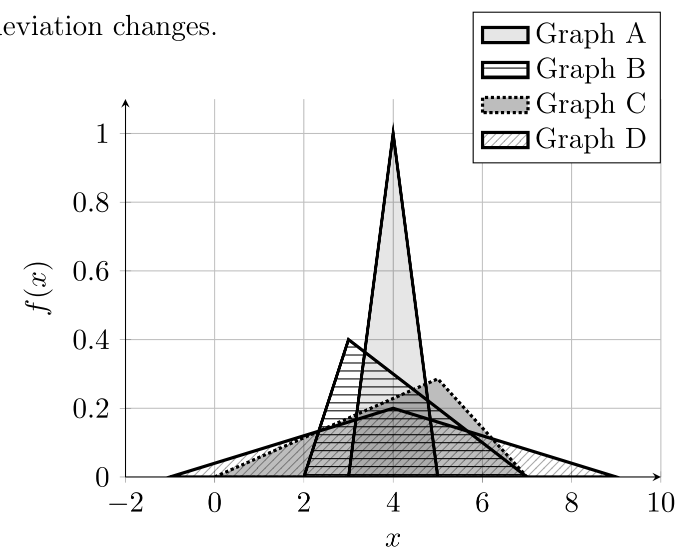


Match each graph with one mean option. Some options will not be used.

- Mean options: $\left\{-\frac{4}{3},\ 0,\ \frac{7}{3},\ \frac{14}{3},\ 8,\ \frac{28}{3},\ 11\right\}$

8. (1) Triangular: same mean, different spread

Four triangular densities are shown. All four distributions have the same expected value, so only the standard deviation changes.



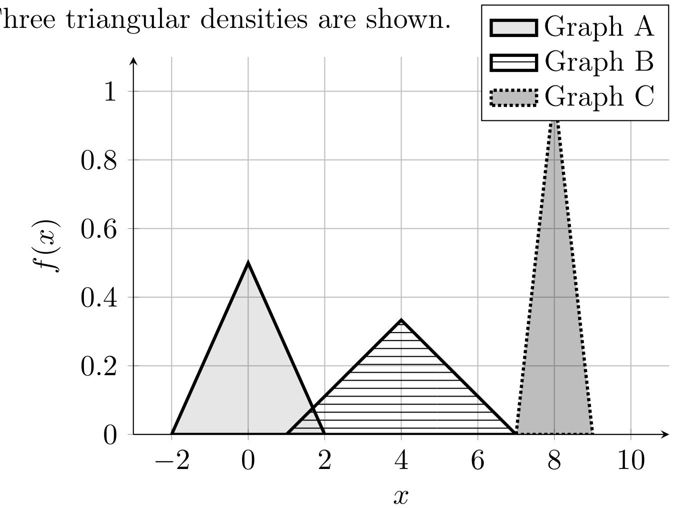
Match each graph with one standard deviation option. Some options will not be used.

- Standard deviation options (approximately):

$\{0.41,\ 1.08,\ 1.47,\ 2.04\}$

9. (1) Match graph, mean, and spread for three triangular distributions

Three triangular densities are shown.

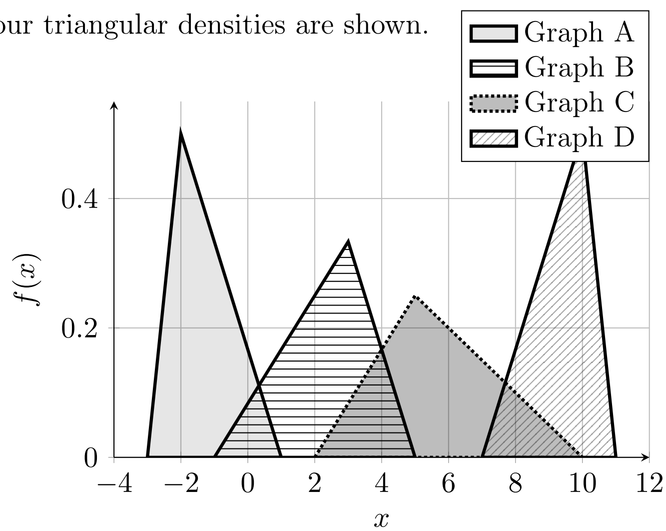


Match each graph with one option from each list.

- Mean options: $\{-2,\ 0,\ 2,\ 4,\ 6,\ 8\}$
- Standard deviation options (approximately): $\{0.41,\ 0.82,\ 1.22\}$

10. (2) Match graph, mean, and spread for four triangular distributions

Four triangular densities are shown.



Match each graph with one option from each list. Some options will not be used.

- Mean options: $\left\{-\frac{4}{3},\ 0,\ \frac{7}{3},\ \frac{17}{3},\ \frac{28}{3},\ \frac{34}{3}\right\}$
- Standard deviation options (approximately): $\{0.41,\ 0.65,\ 0.85,\ 0.85,\ 1.25,\ 1.65\}$

11. (2) Triangular: draw three triangular distributions on the same graph

Draw the following three triangular distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: mean $\mu = 0$ and standard deviation $\sigma \approx 0.82$
- Graph B: mean $\mu = 4$ and standard deviation $\sigma \approx 1.22$
- Graph C: mean $\mu = 8$ and standard deviation $\sigma \approx 0.41$

12. (2) Triangular: draw four triangular distributions on the same graph

Draw the following four centered triangular distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: mean $\mu = -1$ and standard deviation $\sigma \approx 0.82$
- Graph B: mean $\mu = 2$ and standard deviation $\sigma \approx 1.22$
- Graph C: mean $\mu = 6$ and standard deviation $\sigma \approx 0.41$
- Graph D: mean $\mu = 9$ and standard deviation $\sigma \approx 1.63$

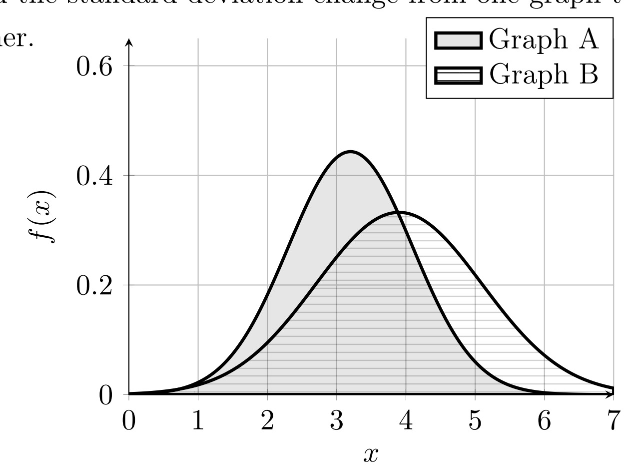
Normal Distribution

For a normal distribution $N(\mu, \sigma^2)$:

$$E[X] = \mu \qquad \mathrm{SD}(X) = \sigma$$

13. (1) Normal I: match two graphs with their mean and standard deviation

Two normal densities are shown. Both the expected value and the standard deviation change from one graph to the other.

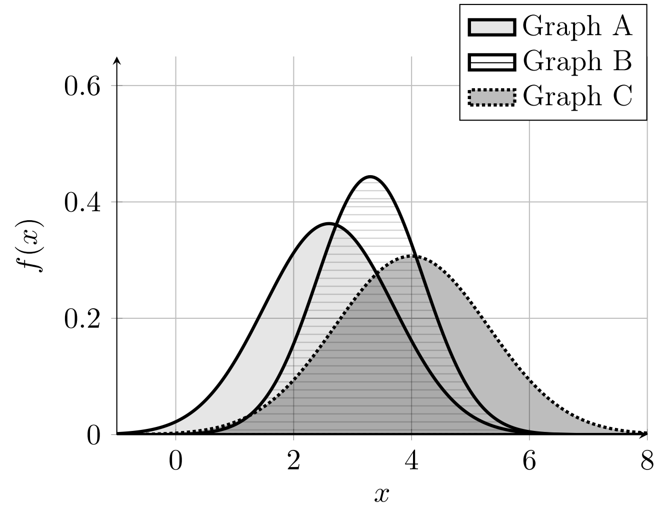


Match each graph with one mean option and one standard deviation option. Some options will not be used.

- Mean options: $\{2.2,\ 3.2,\ 3.9,\ 4.9,\ 5.2\}$
- Standard deviation options: $\{0.9,\ 1.2\}$

14. (1) Normal II: match three graphs with their mean and standard deviation

Three normal densities are shown. Each graph has a different expected value and a different standard deviation.

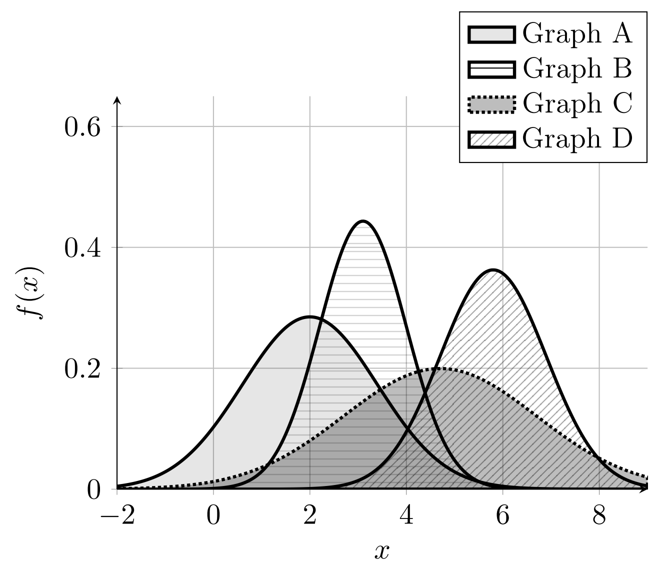


Match each graph with one mean option and one standard deviation option. Some options will not be used.

- Mean options: $\{2.0,\ 2.6,\ 3.0,\ 3.3,\ 4.0,\ 4.9,\ 5.5\}$
- Standard deviation options: $\{0.9,\ 1.1,\ 1.3\}$

15 (1). Normal III: match four graphs with their mean and standard deviation

Four normal densities are shown. Each graph has a different expected value and a different standard deviation.



Match each graph with one mean option and one standard deviation option. Some options will not be used.

- Mean options: $\{1.2,\ 2.0,\ 3.1,\ 3.9,\ 4.7,\ 5.8,\ 6.8\}$
- Standard deviation options: $\{0.9,\ 1.1,\ 1.4,\ 2.0\}$

16. (2) Normal IV: draw two normal distributions on the same graph

Draw the following two normal distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: $X \sim N(3.0, 0.9^2)$
- Graph B: $Y \sim N(3.7, 1.7^2)$

17. (2) Normal V: draw three normal distributions on the same graph

Draw the following three normal distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: $X \sim N(2.4, 1.4^2)$
- Graph B: $Y \sim N(3.2, 0.8^2)$
- Graph C: $Z \sim N(4.0, 2.0^2)$

18. (3) Normal VI: draw four normal distributions on the same graph

Draw the following four normal distributions on the same set of axes. Clearly distinguish the graphs in the picture.

- Graph A: $X \sim N(1.0, 1.2^2)$
- Graph B: $Y \sim N(3.0, 0.7^2)$
- Graph C: $Z \sim N(5.0, 1.6^2)$
- Graph D: $W \sim N(7.0, 1.0^2)$
