Overview

This directory contains the source materials for Grade 10 Term 3 probability instruction. The sequence moves from practice on discrete and continuous distributions (criteria C0–C7), through student assessments and their teacher solution sets, to catch-up work and a C8–C10 web/data-modeling project. All printable resources are LaTeX source files; the only local data assets are three CSV datasets supplied for the project. There are no HTML, CSS, JavaScript, compiled PDFs, or build/configuration files in this directory.

The inventory below documents **32 existing files in 4 directories**. `STRUCTURE.md` itself is the inventory document and is intentionally omitted from the tree.

Directory tree

Reading the diagrams

The directory tree is divided into one landscape diagram per top-level directory so that every documented entry and description remains legible. Directory nodes use a dark fill; file nodes use a light fill, with descriptions shown in a secondary text color. The inventory root is `..`.

1-practice_activities/

2-learning_evidences/

2-learning_evidences/

Lesson assessments, alternate versions, teacher solutions, a computational project brief, and its input datasets.

G10_T3_L4_C8C9C10_dataset_3.csv	C9 test data: 30 measurements labeled as a normal-like process (42.1–65.2), centered in the mid-50s.
G10_T3_L4_C8C9C10_dataset_2.csv	C9 test data: 30 measurements labeled as a triangular-like process (5.2–20.3), concentrated near the middle.
G10_T3_L4_C8C9C10_dataset_1.csv	C9 test data: 30 measurements labeled as a uniform-like process (12.4–26.3).
G10_T3_L4_C8C9C10_activity.tex	Student Learning Evidence 4 brief requiring an HTML/CSS/JavaScript modeling webpage, AI-development evidence, deployment, and a statistical report.
G10_T3_L1_C5_exam_solution.tex	Teacher C5 worked solution set covering six standard-normal table patterns, including symmetry, complements, intervals, and tail unions.
G10_T3_L1_C4_exam_solution_long.tex	Expanded teacher solution for the original C4 exam with an evaluated-criterion overview and individual explanations for all 18 tasks.
G10_T3_L1_C4_exam_solution.tex	Concise teacher answer key for the original C4 exam, grouped into matching and drawing problems and retaining the exam-style header.
G10_T3_L1_C4_examV2_solution.tex	Teacher worked answers for the altered C4 V2 practice set, organized problem by problem.
G10_T3_L1_C4_examV2.tex	Non-credit practice version of the C4 assessment with changed distributions, graph ranges, and answer options.
G10_T3_L1_C4_exam.tex	Student C4 Learning Evidence 2 on matching/drawing uniform, triangular, and normal distributions by mean and spread.
G10_T3_L1_C1C2C3_exam_solution.tex	Teacher worked solutions to the C1–C3 exam, including geometric derivations and plotted density regions.
G10_T3_L1_C1C2C3_exam.tex	Student Learning Evidence 1 exam: 17 C1–C3 density-validity, uniform, piecewise-uniform, and linear/triangular tasks.
G10_T3_C1C7_midterm_solutionV2.tex	Teacher solution set matching the V2 midterm's changed endpoints, scenarios, distribution parameters, and answers.
G10_T3_C1C7_midterm_solution.tex	Teacher solution set for the original C1–C7 midterm, with full derivations, graphs, and a minimal C5–C7 answer section.
G10_T3_C1C7_midtermV2.tex	Alternate student midterm with revised header/rubric, shifted numerical parameters, and reformatted C5 questions.
G10_T3_C1C7_midterm.tex	Student midterm assessing C1–C7 with original numerical parameters and contextual density/normal-distribution tasks.

3-catch_ups/

3-catch_ups/

Remedial C5–C7 assessment material and its teacher solution companion.

G10_T3_C5C6C7_catch_upsolutions.tex

Teacher solutions for the catch-up sheet, with full calculations, distribution graphs, and a minimal-answer recap.

G10_T3_C5C6C7_catch_up.tex

Student catch-up sheet on standard-normal probabilities, contextual standardization, and inverse-normal cutoffs/intervals.

4-extra_material/

4-extra_material/

Standalone student reference material supplementing the normal-distribution work.

normal-table.tex

Printable standard-normal reference sheet with table-reading directions, identities, a shaded curve, and Φ values through $z = 3.09$.

Resource roles

- **Student-facing pages/materials:** the practice activities, context article, assessment sheets, catch-up sheet, project brief, datasets, and normal-table reference are intended for learners. In this repository they are printable LaTeX sources rather than web pages.
- **Teacher materials:** files containing `solution/solutions` provide answer keys or worked derivations. `G10_T3_summary.tex` is explicitly a pedagogical review rather than student exercises.
- **Lesson and assessment resources:** `1-practice_activities/` develops criteria C0–C7 and also contains consolidated C1–C10 material; `2-learning_evidences/` holds formal or practice assessment variants; `3-catch_ups/` provides remediation.
- **Stylesheets and JavaScript:** none are stored here. The C8–C10 brief requires students to create HTML, CSS, and JavaScript, but those deliverables are not part of this directory.
- **Images and media:** no image file is stored here. Several assessment sources request a shared `logo.png` outside this subtree or through the shared LaTeX search path; graphs are generated in LaTeX with TikZ/PGFPlots or shared graph macros.
- **Data and configuration:** the three CSV files are the only local datasets. There are no local configuration files.
- **Downloadable documents:** no compiled PDF or office-document download is checked in; the `.tex` files are sources from which printable documents can be built.
- **Generated/build files:** none are present or inventoried.

Important relationships

- Nearly every LaTeX document imports a shared preamble (`preamble_exams.tex` or `preamble.tex`) using relative search paths. Those shared files live outside `term_3` and supply document classes, packages, layout commands, and assessment helpers; the two `G10_T3_MATERIAL*.tex` files directly input `../../preamble/preamble_exams.tex`.
- C4–C7 assessments and solution sets also import shared graph libraries such as `graphs/probability_distribution_graphs.tex`, `graphs/normal_distribution_graphs.tex`, and `graphs/uniform_linear_probability_distributions.tex`. These external macro files generate reusable uniform, triangular, and normal plots; they are not assets contained in this tree.
- Assessment headers in the midterm, C1–C4 exams, and catch-up sheet reference `logo.png` through the `preamble/graphics` search paths. The C8–C10 activity instead checks `../../preamble/logo.png` explicitly and displays a placeholder if it is unavailable. No local copy of the logo exists.
- `G10_T3_C1C7_midterm_solution.tex` corresponds to `G10_T3_C1C7_midterm.tex`; their V2 counterparts form the alternate pair. V2 changes actual model bounds, means/spreads, wording, and layout—not merely the filename.
- `G10_T3_L1_C4_exam_solution.tex` and `G10_T3_L1_C4_exam_solution_long.tex` both answer the original C4 exam: the former is a compact grouped key, while the latter gives full per-question explanations. `G10_T3_L1_C4_examV2_solution.tex` is specifically paired with the numerically different V2 practice exam.
- `G10_T3_C5C6C7_catch_upsolutions.tex` is the worked companion to `G10_T3_C5C6C7_catch_up.tex`; both cover the same three criteria, while the solution source additionally loads shared graph macros.
- The C8–C10 activity instructs students to build a separate interactive webpage. Its C9 data-modeling mode is expected to accept all three adjacent CSV datasets, estimate a suitable uniform/triangular/normal model,

and compare a fitted PDF with an empirical histogram. No resulting HTML, CSS, JavaScript, report, or deployed-site configuration is included here.

- `normal-table.tex` supports the standard-normal work in C5–C7 as a standalone printable reference. Some practice and solution documents embed their own shorter Φ tables, so they do not directly `input` this file.
- `G10_T3_MATERIAL_V2.tex` is a substantive pedagogical revision of `G10_T3_MATERIAL.tex`: it preserves the C1–C10 collection structure while changing early continuous-density solutions to geometry-based methods and replacing at least one nonlinear model with a piecewise-constant one.

Verification notes

- Every item could be identified confidently from its contents; **no entry requires manual verification**.
- No transient or generated item was present in the tree. In particular, there were no `.DS_Store`, editor-cache, compiler-auxiliary, temporary, dependency, compiled PDF, or LaTeX build-output files to exclude.
