

C3–C4: LISTENING TO USERS

Entrepreneurship and Innovation Grade 10

Grade: _____
Date: _____
Name 1: _____
Name 2: _____
Name 3: _____

1 Identify the Users

Review your observation from Class 2. Identify the people who experience or are affected by the situation.

Question	Our answer
What situation are we investigating?	
Who experiences or is affected by it?	
Why should we ask these people?	

2 Design the Survey

Create a short survey to learn about users' experiences, needs, and difficulties. Questions should be clear, neutral, and focused on the situation.

Element	Our survey plan
Who will answer the survey?	
What do we want to learn?	
How will we collect the answers?	

Write your questions:

#	Survey question
1	
2	
3	
4	
5	
6	
7	

Good survey questions:

- Ask about real experiences;
- Are neutral and clear;
- Do not suggest an answer;
- Help identify needs or difficulties;
- Avoid asking users to choose a solution.

Example: “How often do you experience this situation?”

Avoid: “Is this situation difficult or frustrating for you?”

3 Conduct the Survey

Use your survey with the selected users. Record their answers as accurately as possible.

Element	Evidence from users
User / profile	
Relevant experience	
Important statement	
Need or frustration	

Important: Record what users actually say. Do not change their answers to fit your original idea.

4 Compare the Evidence

Compare what users said with what you observed in Class 2.

Our observation	What users said	What we learned

Look for evidence that confirms, adds to, or contradicts your observations.

5 Need or Solution?

A need is supported by evidence about what people experience, require, or value. A solution is something you propose.

Evidence-based need	Possible solution
Users need less time waiting.	Create self checkout booking system.
Users have difficulty finding information.	Build a searchable website.

Question	Our analysis
What need is supported by evidence?	
What solution are we assuming?	
What evidence supports the need?	

6 Revise Our Understanding

Use the evidence from observations and users to decide whether your original understanding should change.

Original idea	Evidence	What should change?

Our conclusion:

- ☐ Our original understanding is supported.
- ☐ Our understanding needs to be modified.
- ☐ Our understanding has changed substantially.
- ☐ We need more information.

Strongest evidence:

Most important user need:

One thing we learned that we did not expect:

7 Final Check

- ☐ We identified relevant users.
- ☐ We asked open questions and recorded actual responses.
- ☐ We compared user evidence with our observations.
- ☐ We identified an evidence-based need.
- ☐ We separated needs from possible solutions.
- ☐ We used evidence to review our original understanding.

Listen to users. Use evidence. Identify the need before proposing a solution.
